02

Integrated System ⊂ Sub-systems

Requirements
- Each sub-system is developed independently of the other
- Each sub-system has its own SQLite3 for local database

- Each sub-system has its own PostgreSQL db for cloud / on-premise storage.

- Each sub-system has its own branch system
  (this will have the same general structure/code shared by hosted separately for security purposes ?!

- Each sub-system has its own RBAC

- The orchestrator decides where to send each user based on central users database (encrypted)
   - is SQLite3 and PostgreSQL encrypted by default ?!
        default ??
