(05) Integrated System w Sub-systems

The orchestrator $\left[\begin{array}{l}\text{It's both, backend as well as}\\ \text{front-end}\end{array}\right.$

— Has local SQLite3 db for users to determine
    — RBAC

— Synch with its own PostgreSQL users db
    from time to time

⌐ Route users' to respective sub-systems based on
    their roles

— what are best practices for security and privacy.
